

DRUG PREVENTION **ON THE MOVE!**

Operation UNITE's "On The Move!" drug education and prevention initiative is provided **FREE** to 7th and 10th grade students. The five-component program is aligned with the **Kentucky Core Content** areas of Practical Living and Health.

"This particular program may be one of the best I have ever seen as far as getting students involved, thinking, and providing important educational information in a format and manner that the students responded to positively."

Russell Halsey
Principal
Johnson Central High School

"The immediate feedback following the interactive activity and simulation was extremely beneficial in 'bringing home the point' about the dangers of substance abuse and driving under the influence."

Jennifer Mattingly
Principal
Rockcastle Co. High School

Interactive Mobile Classroom

This one-of-a-kind classroom educates students about drugs and their effects. A written survey is given prior to the program arriving on campus. Students are then surveyed throughout the 40-minute presentation via a Qwizdom® system that provides immediate response data on their perceptions. This data is analyzed by the University of Kentucky and provided to host schools to determine specific needs of their student population and end-of-year reporting.

Simulated Impaired Driving Experience (SIDNE)

This exercise utilizes a battery-powered go-kart, operated by a UNITE staff member, to simulate the effects of distraction and impairment from alcohol and other drugs on a motorist's driving skill. Students receive a debriefing on their experience.

Fatal Vision Tri-cycle Course

Students wear impaired-driving goggles while attempting to navigate a tri-cycle through a defined course. Although similar to SIDNE, this activity is designed to simulate visual impairment.

The Choice Is Yours

A face-to-face small group discussion about making the right decisions, and how the positive benefits from making good choices outweigh the consequences of bad choices.

Fatal Vision Marijuana Simulation Experience

Students are given an evidence-based experience of cognitive impairment associated with recreational marijuana use. Special goggles demonstrate a student's susceptibility to this impairment and the potential consequences (severity) that may occur.

None of these exercises will damage the gym floor.
